Package ‘aidatabroker’

November 12, 2026

Type Package

Title Read Licensed Market Data on AI Training Data

Version 0.2.0

Description Reads the tables that 'AIData.Broker' keeps on the market for AI training data (prices, licensing deals, buyers, vendors, lawsuits and related tables, each row with its source) for holders of its Market Data Licence, using the licence's API key. Since 11 November 2026 the tables are sold under that licence, not published openly; see <https://aidata.broker/datasets> for the licence and its terms.

aidb_read *Read a licensed table on the AI training data market*

Description

Reads one of the tables AIData.Broker keeps on the market for AI training data: prices, licensing deals, buyers, vendors, lawsuits and related tables. Each row keeps the source link, the publication date and, where one exists, the source's own words. Since 11 November 2026 the tables are sold under AIData.Broker's Market Data Licence, so reading one needs the licence's API key; see https://aidata.broker/datasets.

Usage

```
aidb_tables()
aidb_read(name = "prices", key = Sys.getenv("AIDATABROKER_KEY"))
```

Arguments

name	The table to read, one of aidb_tables().
key	The Market Data Licence's API key. Defaults to the AIDATABROKER_KEY environment variable.

Value

aidb_tables() returns a character vector of table names. aidb_read() returns a data frame with one row per record.

Examples

```
aidb_tables()
## Not run:
# With a Market Data Licence key in AIDATABROKER_KEY:
prices <- aidb_read("prices")
nrow(prices)

## End(Not run)
```

Index
