

Package ‘poibin’

May 9, 2026

Version 1.6

Date 2024-08-23

Title The Poisson Binomial Distribution

Author Yili Hong [aut, cre],
R Core Team [aut, cph]

Maintainer Yili Hong <yilihong@vt.edu>

Description Implementation of both the exact and approximation methods for computing the cdf of the Poisson binomial distribution as described in Hong (2013) <[doi:10.1016/j.csda.2012.10.006](https://doi.org/10.1016/j.csda.2012.10.006)>. It also provides the pmf, quantile function, and random number generation for the Poisson binomial distribution. The C code for fast Fourier transformation (FFT) is written by R Core Team (2019) <<https://www.R-project.org/>>, which implements the FFT algorithm in Singleton (1969) <[doi:10.1109/TAU.1969.1162042](https://doi.org/10.1109/TAU.1969.1162042)>.

Examples

```
kk=0:10
pp=c(.1,.2,.3,.4,.5)
ppoibin(kk=kk, pp=pp, method = "DFT-CF",wts=rep(2,5))
ppoibin(kk=kk, pp=pp, method = "RF",wts=rep(2,5))
```

```

ppoibin(kk=kk, pp=pp, method = "RNA",wts=rep(2,5))
ppoibin(kk=kk, pp=pp, method = "NA",wts=rep(2,5))
ppoibin(kk=kk, pp=pp, method = "PA",wts=rep(2,5))
dpoibin(kk=kk, pp=pp,wts=rep(2,5))
qpoibin(qq=0:10/10,pp=pp,wts=rep(2,5))
rpoibin(m=2,pp=pp,wts=rep(2,5))

```

poibin

The Poisson Binomial Distribution.

Description

The cdf, pmf, quantile function, and random number generation for the Poisson binomial distribution.

Usage

```

ppoibin(kk, pp, method = "DFT-CF",wts=NULL)
dpoibin(kk, pp,wts=NULL)
qpoibin(qq, pp,wts=NULL)
rpoibin(m, pp,wts=NULL)

```

Arguments

kk	The values where the cdf or pmf to be evaluated.
pp	The vector for p_j 's which are the success probabilities for indicators.
method	"DFT-CF" for the DFT-CF method, "RF" for the recursive formula, "RNA" for the refined normal approximation, "NA" for the normal approximation, and "PA" for the Poisson approximation.
wts	The weights for p_j 's.
qq	The values where the quantile function to be evaluated.
m	The number of random numbers to be generated.

Details

See the reference for computational details.

Value

Returns the entire cdf, pmf, quantiles, and random numbers.
